FESTIVIA

SET-3

By: - Sachin Kr. Singh

Hi,

In this assignment, you will implement a Dynamic and functional School Website

The landing page of the website would feature a big fancy looking for a big school.

There should also be an “Image Slider” on this page which should be showing the visual description of that school, events section along with the state.

Some recommendations/suggestions:

- Use of modern JS is preferred (Vanilla.js).

If you are new to them, learning and implementing on this assignment is recommended.

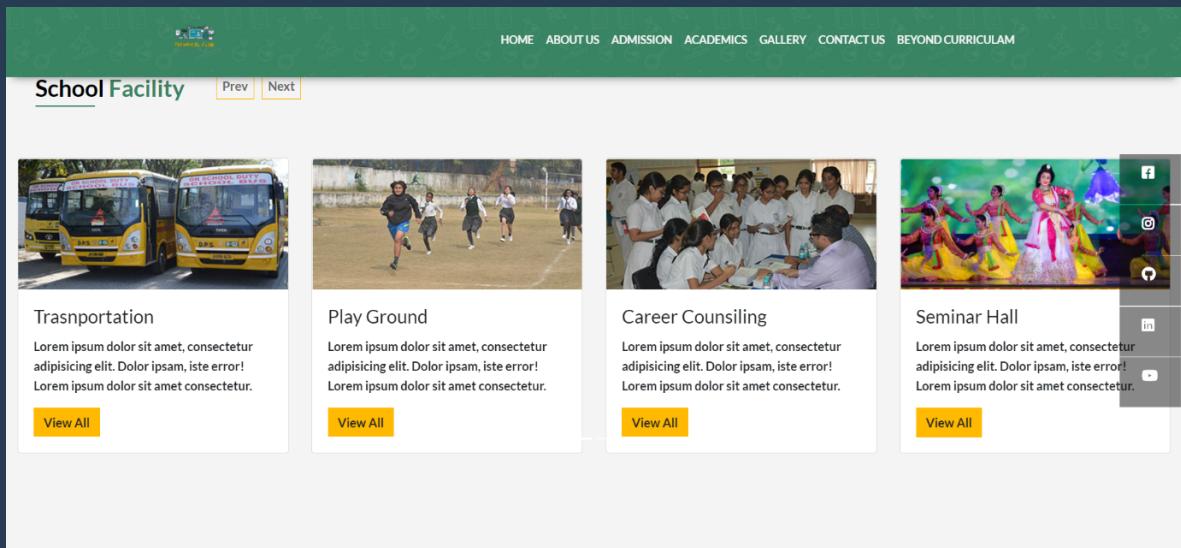

- Please clean-up your code and explain your logic in comments for easy understanding at our end.
- Please provide a procedure to execute your program along with details of any libraries you might be using.
- A brief documentation (even in a single page!) of your work would be great.

The description of the task is intentionally kept minimal to give you room for imagination. Please try to make the website as functional and useful as possible.

Deadline for Assignment Submission: 23-January-2021.

A VISUAL SUPPORT IS GIVEN BELOW

A banner titled "School Facility" with navigation buttons "Prev" and "Next". It features four images: "Transportation" (two yellow school buses), "Play Ground" (students playing soccer), "Career Counselling" (students in a classroom), and "Seminar Hall" (students in traditional Indian attire performing). Each section has a "View All" button.

A banner titled "Quick Links" with icons for "Fee Structure", "Kid's Zone", "Student ERP", "Alumni", and "Events". It features a large image of APJ Abdul Kalam and a quote from him.
